Professional Summary

PMP-certified Digital Manufacturing and MES professional with experience in PAS-X, Syncade, Tulip application development, GMP operations, EBR workflows, DeltaV, SAP, CSV, UAT, system troubleshooting, and cross-functional project delivery.

EXPERIENCE

Sanofi, Framingham, MA - *Senior Manufacturing Associate-MES SME*

Jan 2026 - Present

- Supported PAS-X MES operations within GMP manufacturing environments, contributing to digital manufacturing workflows, troubleshooting, and cross-functional system support.
- Collaborated with manufacturing, quality, and engineering teams during MES lifecycle activities, including process improvements, recipe/workflow support, and electronic batch record execution.
- Assisted in functional MES support and continuous improvement initiatives aligned with PAS-X implementation and operational objectives.

Nitto Denko Avecia, Milford, MA - *Manufacturing Chemist II / MES Advancement*

Jul 2025 - Jan 2026

- Supported digital manufacturing integration by revising electronic batch records aligned with future-state MES workflows and day-to-day manufacturing requirements.
- Acted as a site-level MES subject matter contributor, bridging manufacturing, engineering, and quality requirements to ensure compliant and executable digital batch records.

Moderna, Norwood, MA - *Manufacturing Associate II*

Jul 2024 - Jul 2025

-
- Served as a frontline Syncade MES SME supporting manufacturing operations, batch execution, and digital workflow continuity in regulated GMP environments.
 - Supported MES-related troubleshooting, workflow optimization, and manufacturing system enhancements in collaboration with engineering and automation teams.
 - Contributed to functional and technical manufacturing systems support across Syncade and DeltaV environments.

Moderna, Norwood, MA - *Manufacturing Associate*

Jan 2023 - Jul 2024

- Qualified trainer for Syncade MES batch records, supporting onboarding, system adoption, and compliant digital execution.
- Supported automation-enabled batch execution using MES, SAP, and DeltaV systems within regulated manufacturing operations

MOMA Therapeutics, Cambridge - *Manufacturing Coordinator*

Feb 2022 - Dec 2022

- Managed laboratory procurement, vendor coordination, and inventory supporting automation-enabled research environments.
- Implemented tracking systems for equipment maintenance, calibration, and asset readiness to support uninterrupted operations.

Broad Institute, Cambridge, MA - *Process Development Associate*

Mar 2021 - Aug 2021

- Utilized MES platforms to document batch records, track sample progression, and ensure data integrity within regulated workflows.
- Supported development of scalable, high-throughput workflows, including automation-assisted PCR-based assay execution.

Foundation Medicine, Cambridge, MA - *Digital Supply Chain Specialist*

Sep 2019 - Feb 2022

- Leveraged enterprise systems to manage inventory, track assets, and streamline procurement workflows in regulated laboratory environments.
- Supported asset visibility and reliability initiatives through structured data tracking and reporting.

TECHNICAL SKILLS

- **Digital Manufacturing Systems**
MES (Syncade, PAS-X), Automation & Control Systems (DeltaV), Manufacturing Data Systems (OSI PI), Tulip

- **Analytics & Decision Support**

Excel (advanced), Power BI, Spotfire, Minitab

- **Enterprise & Quality Systems**

SAP, IBM Maximo, Veeva, LIMS, Benchling

- **Delivery & Compliance**

SOP documentation, deviation investigations, CAPA support, GMP compliance, Jira, cross-functional collaboration

EDUCATION

University of Massachusetts Boston, Boston, MA- *Master of Business Administration*

Sep 2021 - May 2023

Curry College, Milton, MA- *Bachelor of Science, Biomedical Engineering*

Sep 2015 - May 2019

CERTIFICATIONS

Industrial Internet of Things (IIoT) — University of Michigan

SQL for Data Science — University of California, Davis

Digital Manufacturing & Design — State University of New York

Project Management Professional (PMP)®, Project Management Institute

SELECTED PROJECTS

SimpleMES Manufacturing OS — Full-Stack MES Portfolio Project

Portfolio: <https://kes-site.vercel.app> | Live Demo:

<https://simplemes-manufacturing-os.vercel.app>

Source code private; available upon request for hiring/review purposes.

- Built and deployed a non-proprietary pharma/biotech MES portfolio application demonstrating EBR execution, controlled recipe versioning, SOP visibility, GMP-style audit trails, QA review, QC/LIMS sample visibility, scheduling, shift handoff, change control, and SOP/training readiness.
- Designed operator-friendly EBR workflows with step-by-step execution, equipment/material verification, process value entry, operator confirmations, electronic signatures, second-person verification, and clear plain-English blocking messages.
- Developed guided correction decision-tree workflows for common manufacturing issues while preserving original values, correction reasons, timestamps, users, and audit history.
- Modeled cross-functional manufacturing visibility for QA, QC, Scheduling, MES Engineering, MST/MSAT, and Management through release-readiness

signals, QC/LIMS sample blockers, schedule risk, shift handoff notes, and change-control impact tracking.

- Built with Next.js, React, TypeScript, Tailwind CSS, Prisma, a PostgreSQL-ready data model, seeded demo data, validation-style documentation, and Vercel deployment.

Tulip Composable MES Project

Presentation:

<https://kes-site.vercel.app/consulting-artifacts/tulip-solar-panel-digital-traveler.pdf>

- Built a functional low-code manufacturing application in Tulip to digitize a shop-floor workflow.
- Configured operator-facing steps, data capture, process guidance, issue handling, and production visibility.
- Translated manufacturing requirements into a usable digital workflow and demonstrated rapid adoption of Tulip's composable MES platform.
